

# LED SYSTEM TRACK LIGHT

## PRODUCT SUMMARY

Ideal for showcasing merchandise, this unique 72W system track light offers an even, pure white light that is as bright as 60W of halogen but with significantly less heat.

Specially designed for trade show system booths, this all-in-one fixture is an ideal replacement to our competitors' labor-intensive 4ft track with three individual light fixtures and screw-in lamps. With no fixture heads to attach, no lamps to change, our all-in-one System LED Track Light is so quick and easy to install, it will pay for itself in no time.

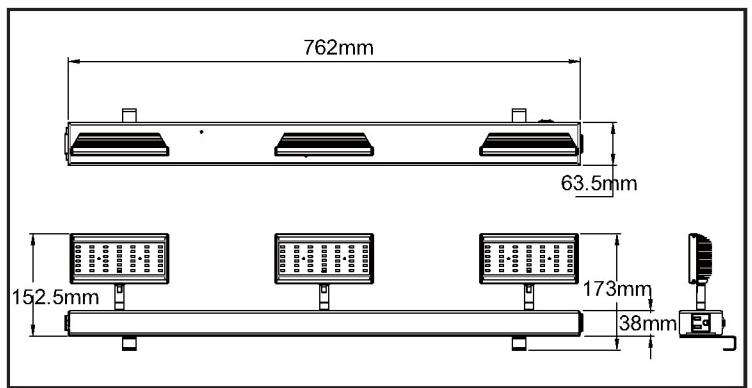

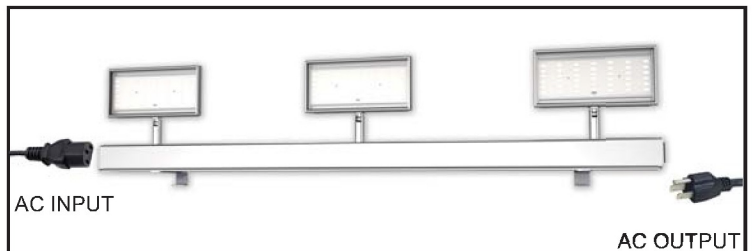

Three state-of-the-art 24W LED lamps, mounted on a cross bar, are individually adjustable with 140 degrees tilt and 360 degrees rotation. Once in position the lamps lock in to place. Customizable to suit most common system rails.

A signature product custom-engineered, designed and built by Prism Lighting Group™.
