■ Mechanical Specification:

- ※ Input Rubber wire 3*18AWG Black and White to be connected to AC L and N ,Green wire go ground,
- ※Output Rubber wire, 2*16AWG Red to LED Positive side (+) , Black to LED Negative side (-).

■Dimming Operation

- 1) Output constant current level can be adjusted through input terminal of the AC phase line(L) by connection a triac dimmer.
- 2) The Pulse-Width Modulation (PWM) of output voltage can be adjusted by the input terminal of the AC phase line(L) by connection a phase/triac dimmer.
- 3) Compatible with triac dimmers, Forward phase, leading edge or Reverse phase, trailing edge ,Electric low voltage Dimmers.
- 4) please try to use the small power dimmers with power at least 1.5 times as the output power of the driver., which can be accessed to a wider dimming range, high-power dimmer is difficult to achieve the output current to zero.

■Derating Curve

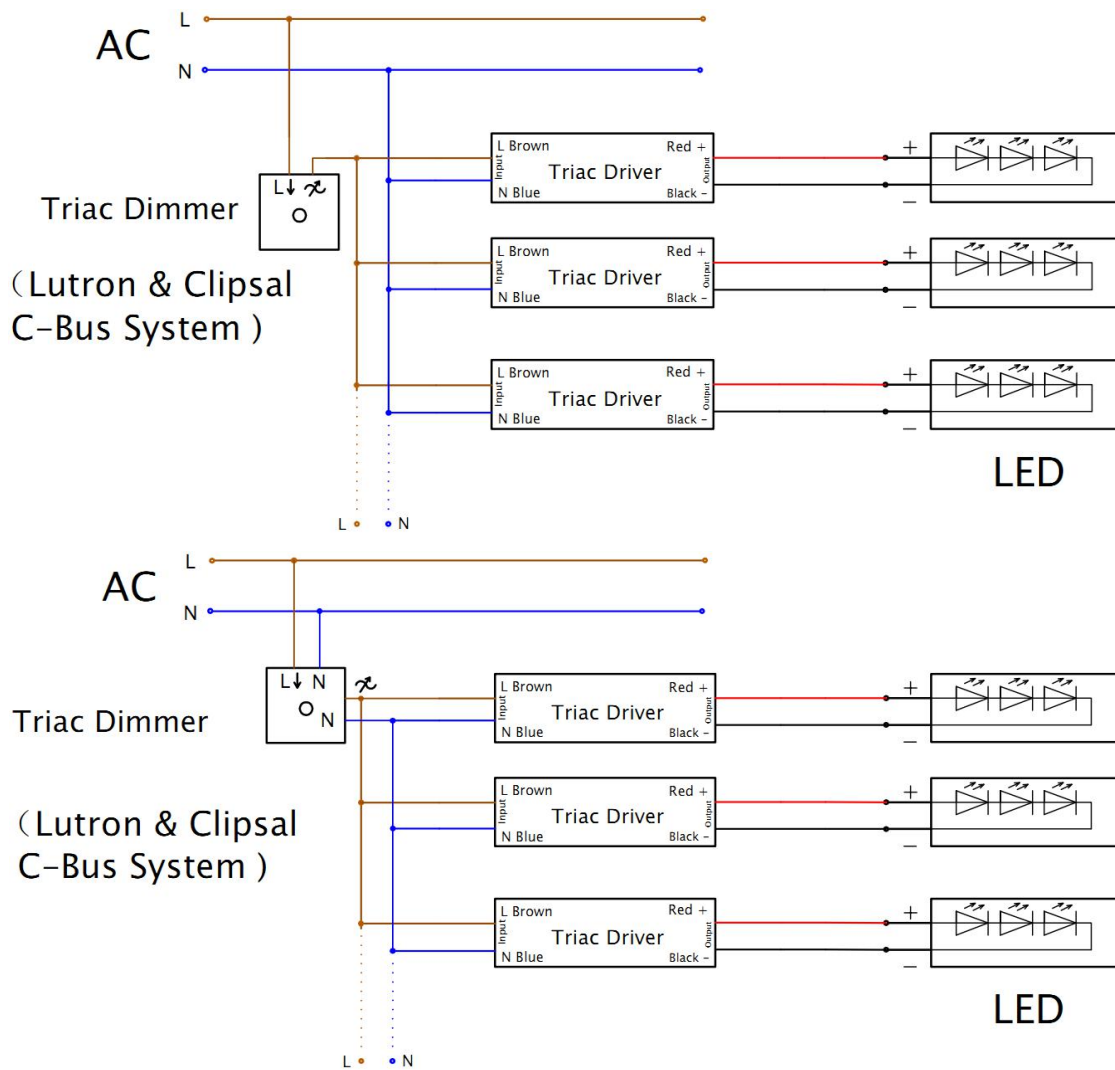

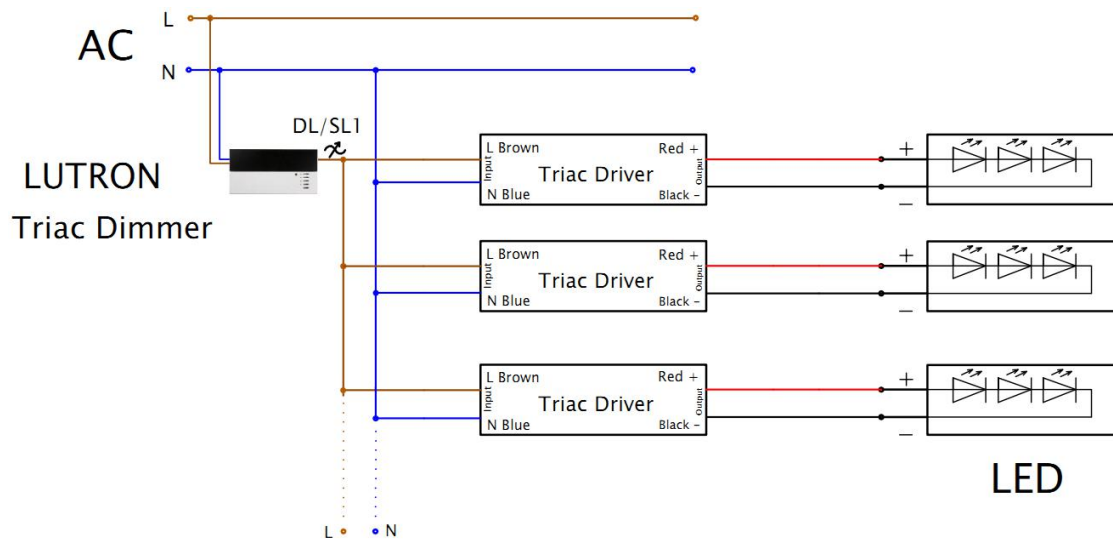

※Load carried in accordance with the load derating curve, according to the ambient temperature derating, in order to extend the working life.
